Patent No. 15763209
GENERAL INFORMATION:
APPLICANT: SUKhatme, Vikas P.
TITLE OF INVENTION: METHODS AND MATERIALS RELATING TO THE
TITLE OF INVENTION: FUNCTIONAL DOMAINS OF DNA BINDING PROTEINS
NUMBER OF SEQUENCES: 67
CORRESPONDENCE ADDRESS:
ADDRESSEE: Arnold, White & Durkee
STREET: 321 No. 5763209th Clark Street, Suite 800
CITY: Chicago.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

GENERAL INFORMATION:
APPLICANT: Case, Casey C.
APPLICANT: Cox III, George N.
APPLICANT: ApplicANT: Andrew
APPLICANT: Rebar, Edward J.
APPLICANT: Sangamo Biosciences, Inc.
APPLICANT: Sangamo Biosciences, Inc.
TITLE OF INVENTION: Selection of Sites for Targeting by Zinc Finger
TITLE OF INVENTION: Proteins and Methods of Designing Zinc Finger
TITLE OF INVENTION: to Bind to Preselected Sites
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                     GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: SUNDARME, VIKAB P.

TITLE OF INVENTION: METHODS AND MATERIALS RELATING TO THE

TITLE OF INVENTION: FUNCTIONAL DOMAINS OF DNA BINDING PROTEINS

NUMBER OF SEQUENCES: 67

Sequence 95. Application US/10113424

| Sequence 95. Application US/10113424
| Patent No. 6785613
| CENERAL INFORMATION:
| APPLICANT: Elsenberg, Stephen P. |
| APPLICANT: Estat. Edward J. |
| APPLICANT: Case, Casey C. |
| APPLICANT: Sangamo Biosciences, Inc. |
| APPLICANT: Sangamo Biosciences, Inc. |
| APPLICANT: Sangamo Biosciences, Inc. |
| APPLICANT: Sept. Edward J. |
| FILE OF INVENTION: Proceeding and Methods of Designing Zinc Finger Proteins |
| FILE REFERENCE: 019496-001800US |
| CURRENT APPLICATION NUMBER: US/09/229,007A |
| PRIOR FILING DATE: 1999-01-12 |
| NUMBER OF SEQ ID NOS: 97 |
| SEQ ID NO 95 |

Sequence 1, Application US/09127926

Sequence 1, Application US/09127926

GENERAL INFORMATION:

APPLICANT: Baliyat, Bassil L.

APPLICANT: Street, Arthur

APPLICANT: Su, Yacying

TITLE OF INVENTION: Apparatus and Method for Automated Protein Design

FILE REFREENCE: A55353-4/FFT/RMS/SJR

CURRENT APPLICATION NUMBER: US/09/127,926

CURRENT FILING DATE: 1999-07-31

PRIOR PILING DATE: 1997-04-11

PRIOR FILING DATE: 1997-04-11

PRIOR FILING DATE: 1997-06-04

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 14, Application US/09731558
Patent No. 650371.
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Case, Casey Christopher
APPLICANT: Liu, Qiang
APPLICANT: Liu, Qiang
APPLICANT: Sangamo Biosciences, Inc.
TITLE OF INVENTION: Methods of Using Randomized Libraries of Zinc Finger
TITLE OF INVENTION: Proteins for the Identification of Gene Function
FILE REPERENCE: 019496-00321008
CURRENT APPLICATION NUMBER: US/09/731,558
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                            December 27, 2004, 19:21:38; Search time 15.85 Seconds (without alignments) 29.289 Million cell updates/sec
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 30, Sequence 30, Sequence 18,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 29,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                        GENERAL INFORMATION:
APPLICANT: Cox III, George No. 6534261bert
APPLICANT: Cox III, George No. 6534261bert
APPLICANT: Case, Casey, Casey Christopher
APPLICANT: Bisenberg, Stephen P.
APPLICANT: Sisenberg, Sharon Kaye
APPLICANT: Sangamo Biosciences, Inc.
APPLICANT: Sangamo Biosciences, Inc.
APPLICANT: Singamo Biosciences, Inc.
TITLE OF INVENTION: Regulation of Endogenous Gene Expression in Cells Using TITLE OF INVENTION: Zinc Finger Proteins
FILE REPERENCE: 019496-0022000S
CURRENT APPLICATION NUMBER: US/09/229,037A
CURRENT FILING DATE: 1999-01-12
NUMBER OF SEQ ID NOS: 40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             US-09-478-681-15

US-09-478-681-15

Sequence 15, Application US/09478681

Patent No. 6607882

GENERAL INFORMATION:
APPLICANT: Case, Casey Christopher
APPLICANT: Eisenberg, Stephen P.
APPLICANT: Estonberg, Stephen P.
APPLICANT: Spratt, Sharon K.
TITLE OF INVENTION: REQUIATION OF ENDOGENOUS GENE EXPRESSION IN CELLS
TITLE OF INVENTION: USING ZING FINGER PROTEINS
TITLE OF INVENTION: USING ZING FINGER PROTEINS
FILE REPERENCE: 8325-0002.10 / $2-US3
CURRENT FILING DATE: 2000-01-06
NUMBER OF SEQ ID NOS: 43

SOOTWARE: PatentIn Ver. 2.0

US-09-478-681-30

i Sequence 30, Application US/09478681

i Patent No. 6607882

j GENERAL INFORMATION:

APPLICANT: Case, Casey Christopher

APPLICANT: Elsenberg, Stephen P.

APPLICANT: Bisenberg, Stephen P.

APPLICANT: Bracon K.

TITLE OF INVENTION: REGULATION OF ENDOGENOUS GENE EXPRESSION IN CELLS

TITLE OF INVENTION: USING ZINC FINGER PROTEINS

TITLE OF INVENTION UNMBER: US/09/478,681

CURRENT FILING DATE: 2000-01-06

SEQ ID NOS: 43

SOFTWARE: PATENTIN Ver. 2.0

LENGTH: 196

LENGTH: 196

LENGTH: 196

TYPE: PRT

ORGANISM: Artificial Sequence

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 69, Application US/09173941

Patent No. 6140081

GRNERAL INFORMATION:
APPLICANT: BARBAS, Carlos F.
TITLE OF INVENTION: ZINC FINGER BINDING DOMAINS FOR GNN FILE REFERENCE: NOV0081S
CURRENT APPLICATION NUMBER: US/09/173,941

CURRENT FILING DATE: 1998-10-16

NUMBER OF SEQ ID NOS: 120

SOFTWARE: Patentin Ver. 2.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Issued Patents AA:*

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6503717
GENERAL INFORMATION:
APPLICANT: Case, Casey Christopher
APPLICANT: Liu, Qiang
APPLICANT: Edward J.
APPLICANT: Sangamo Biosciences, Inc.
TITLE OF INVENTION: Methods of Using Randomized Libraries of Zinc Finger
TITLE OF INVENTION: Proteins for the Identification of Gene Function
FILE REPERENCE: 019496-002310US
CURRENT APPLICATION NUMBER: US/09/731,558
CURRENT FILING DATE: 2000-12-06
PRIOR APPLICATION NUMBER: US 09/456,100
PRIOR APPLICATION NUMBER: US 09/456,100
NUMBER OF SEQ ID NOS: 24
SOFTWARE: PatentIn Ver. 2.1

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 428, Application US/09989789

Patent No. US2002063379A1

GENERAL INFORMATION:

APPLICANT: LIU Qiang

TITLE OF INVENTION:

TITLE OF INVENTION: POSITION DEPENDENT RECOGNITION OF GNN NUCLEOTIDE

TITLE OF INVENTION: TRIPLETS BY ZINC FINGERS

FILE REFERENCE: 8325-0011.20 / S11-US2

CURRENT APPLICATION NUMBER: US/09/989,789

CURRENT FILING DATE: 2002-03-25

NUMBER OF SEQ ID NOS: 4085

SOFTWARE: PATENTIN Ver. 2.0

SEQ ID NO 428
                                                                                                                                                                                                                                                   Sequence 426, Application US/09989789

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 14, Application US/09731558

Sequence 17, Application US/09731558

Bratent No. 6503717

GENERAL INFORMATION:
APPLICANT: Case, Casey Christopher
APPLICANT: Liu, Qiang
APPLICANT: Bangame Blosciences, Inc.
TITLE OF INVENTION: Methods of Using Randomized Libraries of Zinc Finger
TITLE OF INVENTION: Proteins for the Identification of Gene Function
FILE REFERENCE: 019496-003210US
CURRENT APPLICATION NUMBER: US/09/731,558
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                  (without alignments)

Sequence 17, Application US/09731558

Patent No. 6503717

GENERAL INFORMATION:

APPLICANT: Case, Casey Christopher

APPLICANT: Liu, Qiang

APPLICANT: Liu, Qiang

APPLICANT: Rebar, Edward J.

TITLE OF INVENTION: Methods of Using Randomized Libraries of Zinc Finger

TITLE OF INVENTION: Proteins for the Identification of Gene Function

TITLE OF INVENTION: Proteins for the Identification of Gene Function

TITLE OF INVENTION: Proteins for the Identification of Gene Function

FILE REPRENCE: 019496-003210US

CURRENT APPLICATION NUMBER: US 09/456,100

PRIOR APPLICATION NUMBER: US 09/456,100

PRIOR APPLICATION NUMBER: US 09/456,100

NUMBER OF SEQ ID NOS: 24

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                   (without alignments)

Sequence 14, Application US/09731558
Patent No. 650317
GENERAL INFORMATION:
APPLICANT: Case, Casey Christopher
APPLICANT: Liu, Qiang
APPLICANT: Sangame Blosciences, Inc.
TITLE OF INVENTION: Methods of Using Randomized Libraries of Zinc Finger
TITLE OF INVENTION: Proteins for the Identification of Gene Function
FILE REFERENCE: 019496-003210US
CURRENT APPLICATION NUMBER: US/09/731,558
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                               December 27, 2004, 20:31:09; Search time 16.35 Seconds (without alignments) 28.393 Million cell updates/sec

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      US-08-040-548-34

Sequence 34, Application US/08040548

Patent No. 5763209

SEQUENCE IN O. 5763209

TITLE OF INVENTION: METHODS AND MATERIALS RELATING TO THE TITLE OF INVENTION: FUNCTIONAL DOMAINS OF DNA BINDING PROTEINS

TITLE OF INVENTION: FUNCTIONAL DOMAINS OF DNA BINDING PROTEINS

NUMBER OF SEQUENCES: 6

CORRESPONDENCE ADDRESS:

ADDRESSEE: Arnold, White & Durkee

STREET: 321 No. 5763209th Clark Street, Suite 800

CITY: Chicago

STRATE: 111inois

CONDITRY: U.S.A.

ZIP: 60610

CONDITRY: U.S.A.

MEDIUM TYPE: Floppy disk

COMPUTER: Patentin Release #1.0, Version #1.25

CURRENT APPLICATION DAMBER: US/08/040,548

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                          December 27, 2004, 17:02:31 ; Search time 51.45 Seconds (without alignments) 48.859 Million cell updates/sec
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Description
